

SDOT

dissolved oxygen data logger

Dissolved oxygen and temperature monitoring

Data loggers

SDOT enables data collection and recording of the measurements of dissolved oxygen concentration and saturation as well as temperature.

It uses an Aanderaa dissolved oxygen sensor.

Several versions of SDOT are available for a use in coastal areas or deep waters (6000m), depending on the response time, the depth range and the configuration (embedded or remote) .

Easy to use:

- Light and compact
- Fast wireless configuration and data collection thanks to a communication interface (inductive Data Pencil) connected to the USB port of a PC using Winmemo software
